Product Data

MODEL
CG7200

The CG7200 is a keyboard operated phototypesetting unit designed for fast, accurate production of top quality display lines. The unit's keyboard features light, "electric typewriter" touch, and is easily adaptable to standard typing skills. The CG7200 is remarkably simple to operate and maintain; and operator training time is minimal. Superior or market figures used in newspaper production are positioned automatically, and direct keyboard kerning eliminates costly cutting time. The Model CG7200 is the finest, fastest display phototypesetter at the lowest possible price.
